The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply			
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).  Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### **DETAILED ACTION**

### Specification

This application does not contain an abstract of the disclosure as required by 37 CFR 1.72(b). An abstract on a separate sheet is required.

# Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in Graham v. John Deere Co., 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- Resolving the level of ordinary skill in the pertinent art. 3.
- Considering objective evidence present in the application indicating 4. obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-6, 8-9, 11-13, 15-17 and 19-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Miyoshi U.S. patent No. 5,252,304 in view of Rosinger et al., U.S. patent No. 4,085,147.

Miyoshi teaches sterilization of an enclosure by heating formalin to release formaldehyde to achieve sterilization. See column 1, lines 30-40, column 4, lines 50-60-8 and the claims.

Rosinger et al., teach that it is known and expected that hexamethylenetetramine is a precursor to formaldehyde and releases formaldehyde in an exothermic reaction with reaction temperatures from 10° to 150°C. See column 1, lines 40-60.

It would have been obvious to one of ordinary skill in the art to optimize the release of formaldehyde in the system of Miyoshi by substituting the known and expected heat of the exothermic reaction of hexamethylenetetramine itself releasing formaldehyde, because it would employ known chemistry to enhance the formaldehyde generation without requiring an outside or secondary heat source.

With respect to claims 3 and 9, it would have been well within the purview of one of ordinary skill in the art to determine the quantities necessary to provide the appropriate heat and formaldehyde release based on the instant sterilization requirements of the given enclosure.

With respect to claims 5-6, 11-13, 15-17 and 19-20, it would have been well within the purview of one of ordinary skill in the art to determine the optimal ratios and

Art Unit: 1744

concentrations needed to provide sterilizing amounts of formaldehyde in the given enclosure.

### Allowable Subject Matter

Claims 7, 10, 14 and 18 are is found to be free of the prior art.

The following is a statement of reasons for the indication of allowable subject matter: the closest prior art of record fails to teach or suggest the admixture of sulphur sublime, red iron oxide, silica and citric acid along with hexamethylenetetramine in an exothermic reaction for heating formalin to achieve release of formaldehyde.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Krisanne Jastrzab whose telephone number is 571-272-1279. The examiner can normally be reached on Mon.-Wed. 6:30am-4:00pm and alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert J. Warden can be reached on 571-272-1281. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
